

ANDRES CHAIT

Full Stack Developer

Date of birth: **25/08/1987**

National ID N#: **324606854**

Nationality: **Israeli**

Place of birth: **Buenos Aires, Argentina**

ABOUT ME

Full Stack Developer with over 10 years of experience starting as self-employed, moving on to a dynamic startup environment, and most recently in a global company leading in network intelligence and security solutions. Always enthusiastic to explore new opportunities, open-minded and ready to take on professional challenges. Great team player but also working well independently, adapting to changing priorities and methodologies. Self-learner with excellent time-management abilities and documentation skills. Main professional interests include renewable methodologies, tools and all topics related to business projects. Deeply motivated to take tasks beyond my work as a programmer, such as supporting different teams, managing projects.

WORKING EXPERIENCE

EMPLOYMENT HISTORY & PROJECT PORTFOLIO

ALLOT COMMUNICATIONS

2017-PRESENT

IT Developer

- **Development from scratch and Ongoing maintenance:**
 - Platform with over 80 dedicated tools to generate non-conventional reports for the Finance, Sales and Engineering departments, including visibility of discrepancies between systems
 - Integration between CPQ & PLM endpoints that played a critical role for the PM department to speed up kickoff stage for new marketing products
 - Salesforce Applications and Processes
 - API Interface for R&D, intended to automate product-key retrieval and activation
 - Audit system like Google Analytics for the company's SharePoint portal
 - Automated scripts for:
 - Data transfer from PMS (Clarizen) to BI/BA (Sisense)
 - Daily update of currency exchange rates from Oracle to CPQ application
 - Data transfer of HR data from HCM into AD and Microsoft 365
 - Creation of users in LMS System (Docebo) from CRM & AD
 - Data transfer + Manipulation of financial forecasts into Oracle and BI/BA side
 - Platform for employees to update their personal details, submitted for HR review and approval, including change logging and customized email notifications
 - Backup server for old support tickets offering a dynamic API that allows access to the information in a few clicks
 - Survey System (Web-based) when a customer's ticket is closed
 - Salesforce Web tool to quickly and easily populate sandbox environments with production data
- **Frequent Data Analysis implementations:** using algorithms and scrapping techniques, combining different sources such as databases, platforms and Excel files

- **End-to-End implementation of development requests from various departments:**
 - Identifying user needs and possible optimizations
 - Establishing suitable solutions and approaches
 - Providing time estimations and working within time frames under minimal supervision
 - Escalating arising issues in a prompt manner
 - Ongoing user support and relevant modifications
- **Technical Support & User Assistance:** Investigating issues, requesting missing details and additional information, directing to the relevant departments when needed.
- **Inter-departmental cooperation:** assisting other teams with insight and expertise within my technical domain
